## General problem in the Calculus of Variation

Hilbert's $19^{\text {th }}$ Problem
"Are the solutions of Lagrangians always analytic?"

## General problem in the Calculus of Variation

Hilbert's $19^{\text {th }}$ Problem
"Are the solutions of Lagrangians always analytic?"

$$
\mathrm{E}(\mathrm{u})=\int_{\Omega} \mathrm{F}(\mathrm{Du}) \mathrm{dX} \longrightarrow \min
$$

## General problem in the Calculus of Variation

Hilbert's $19^{\text {th }}$ Problem
"Are the solutions of Lagrangians always analytic?"

$$
E(u)=\int_{\Omega} F(D u) d X \longrightarrow \min .
$$

- Convexity of F is a Necessary and Sufficient condition for Weak Lower Semicontinuity of $E$.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

Let u minimizes $\mathrm{E}(\mathrm{v}):=\int_{\Omega} \mathrm{F}(\mathrm{Dv}) \mathrm{dX}$.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

$$
\begin{aligned}
& \text { Let u minimizes } \mathrm{E}(\mathrm{v}):=\int_{\Omega} \mathrm{F}(\mathrm{Dv}) \mathrm{dX} . \\
& \qquad 0=\left.\frac{\mathrm{d}}{\mathrm{dt}} \mathrm{E}(\mathrm{u}+\mathrm{t} \varphi)\right|_{\mathrm{t}=0}
\end{aligned}
$$

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

Let u minimizes $\mathrm{E}(\mathrm{v}):=\int_{\Omega} \mathrm{F}(\mathrm{Dv}) \mathrm{dX}$.

$$
0=\left.\frac{\mathrm{d}}{\mathrm{dt}} \mathrm{E}(\mathrm{u}+\mathrm{t} \varphi)\right|_{\mathrm{t}=0}=\int_{\Omega} \mathrm{D} \varphi \cdot \mathrm{~F}_{\mathrm{j}}(\mathrm{Du}) \mathrm{dX} .
$$

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

$$
\text { Let } \begin{aligned}
u \text { minimizes } E(v): & =\int_{\Omega} F(D v) d X . \text { Then, } \\
& \operatorname{div}\left(F_{j}(D u)\right)=0 .
\end{aligned}
$$

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

Let $u$ minimizes $E(v):=\int_{\Omega} F(D v) d X$. Then,

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

Passing the Derivatives Through,

$$
\sum_{i, j} F_{i j}(D u) D_{i j} u=0 .
$$

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

Let u minimizes $E(v):=\int_{\Omega} F(D v) d X$. Then,

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

Passing the Derivatives Through,

$$
\sum_{i, j} F_{i j}(D u) D_{i j} u=0 .
$$

- If $\mathrm{F}_{\mathrm{ij}}(\mathrm{Du})$ is Hölder Continuous, Schauder's Estimates give u is $\mathrm{C}^{\infty}$ and Analyticity follows by standard arguments.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

Let u minimizes $E(v):=\int_{\Omega} F(D v) d X$. Then,

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

Passing the Derivatives Through,

$$
\sum_{i, j} F_{i j}(D u) D_{i j} u=0 .
$$

- If Du is Hölder Continuous, Schauder's Estimates give u is $\mathrm{C}^{\infty}$ and Analyticity follows by standard arguments.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

- Recall

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

We need to show a solution to the above equation is $\mathrm{C}^{1, \alpha}$.

- Fix a direction $\mu$.
- Thus, $\mathrm{u}_{\mu}$ satisfies an Equation

$$
\operatorname{div}\left(a_{\mathrm{ij}}(X) D \xi\right)=0
$$

where $\mathrm{a}_{\mathrm{ij}}$ is just bounded measurable and elliptic.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

- Recall

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

We need to show a solution to the above equation is $\mathrm{C}^{1, \alpha}$.

- Fix a direction $\mu$.
- Thus, $\mathrm{u}_{\mu}$ satisfies an Equation

$$
\operatorname{div}\left(a_{\mathrm{ij}}(X) D \xi\right)=0
$$

where $\mathrm{a}_{\mathrm{ij}}$ is just bounded measurable and elliptic.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

- Recall

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

We need to show a solution to the above equation is $\mathrm{C}^{1, \alpha}$.

- Fix a direction $\mu$. Deriving the above Equation in the $\mu$
direction gives
- Thus, $\mathrm{u}_{\mu}$ satisfies an Equation

$$
\operatorname{div}\left(a_{i j}(X) D \xi\right)=0
$$

where $\mathrm{a}_{\mathrm{ij}}$ is just bounded measurable and elliptic.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

- Recall

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

We need to show a solution to the above equation is $\mathrm{C}^{1, \alpha}$.

- Fix a direction $\mu$. Deriving the above Equation in the $\mu$ direction gives
- Thus, $\mathrm{u}_{\mu}$ satisfies an Equation

$$
\operatorname{div}\left(\mathbf{a}_{\mathrm{ij}}(X) D \xi\right)=0
$$

where $\mathrm{a}_{\mathrm{ij}}$ is just bounded measurable and elliptic.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

- Recall

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

We need to show a solution to the above equation is $\mathrm{C}^{1, \alpha}$.

- Fix a direction $\mu$. Deriving the above Equation in the $\mu$ direction gives

$$
\operatorname{div}\left(\mathrm{F}_{\mathrm{ij}}(\mathrm{Du}) \mathrm{Du}_{\mu}\right)=0
$$

- Thus, $\mathrm{u}_{\mu}$ satisfies an Equation

$$
\operatorname{div}\left(\mathbf{a}_{\mathrm{ij}}(X) \mathrm{D} \xi\right)=0
$$

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

- Recall

$$
\operatorname{div}\left(F_{j}(D u)\right)=0
$$

We need to show a solution to the above equation is $\mathrm{C}^{1, \alpha}$.

- Fix a direction $\mu$. Deriving the above Equation in the $\mu$ direction gives

$$
\operatorname{div}\left(F_{\mathrm{ij}}(\mathrm{Du}) \mathrm{Du}_{\mu}\right)=0
$$

- Thus, $\mathrm{u}_{\mu}$ satisfies an Equation

$$
\operatorname{div}\left(\mathbf{a}_{\mathrm{ij}}(X) D \xi\right)=0
$$

where $\mathrm{a}_{\mathrm{ij}}$ is just bounded measurable and elliptic.

## A PDE Approach for Hilbert's $19^{\text {th }}$ Problem

Goal
Establish Hölder Continuity for solutions to

$$
\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Du}\right)=0
$$

when $\mathrm{a}_{\mathrm{ij}}$ is only known to the bounded measurable and elliptic.

## The Theorem

Theorem (De Giorgi-Nash-Moser)
Let $\mathrm{a}_{\mathrm{ij}}$ be a uniform elliptic matrix and u an $\mathrm{H}^{1}$ (distributional) solution to

$$
\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Du}\right)=0 \text { in } \mathrm{B}_{1} .
$$

Then u is Hölder continuous in $\mathrm{B}_{1 / 2}$. Furthermore,

$$
\|u\|_{\mathrm{C}^{\alpha}\left(\mathrm{B}_{1 / 2}\right)} \leq \mathrm{C}\|\mathrm{u}\|_{\mathrm{L}^{2}\left(\mathrm{~B}_{1}\right)},
$$

where $C$ depends only on dimension and ellipticity.

## Outline

$\checkmark$ The Proof is Divided in two parts:

## Outline

$\checkmark$ The Proof is Divided in two parts:

1. An $L^{\infty}$ estimate in terms of the $L^{2}$ norm.
2. An Oscillation Lemma

## Outline

1. An $L^{\infty}$ estimate in terms of the $L^{2}$ norm.
2. An Oscillation Lemma

## Outline

$\checkmark$ The Proof is Divided in two parts:

1. An $L^{\infty}$ estimate in terms of the $L^{2}$ norm.
2. An Oscillation Lemma: De Giorgi's famous Oscillation Lemma.

## $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ Estimate

Lemma ( $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ )
Let u satisfy

$$
\operatorname{div}\left(a_{i j}(X) D u\right) \geq 0
$$

There exists a $\delta>0$, depending only on ellipticity, such that

## $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ Estimate

Lemma ( $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ )
Let u satisfy

$$
\operatorname{div}\left(a_{i j}(X) D u\right) \geq 0
$$

There exists a $\delta>0$, depending only on ellipticity, such that

## $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ Estimate

Lemma ( $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ )
Let u satisfy

$$
\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Du}\right) \geq 0 .
$$

There exists a $\delta>0$, depending only on ellipticity, such that

$$
\left\|\mathrm{u}^{+}\right\|_{\mathrm{L}^{2}\left(\mathrm{~B}_{1}\right)} \leq \delta \quad \text { implies } \quad\left\|\mathrm{u}^{+}\right\|_{\mathrm{L}^{\infty}\left(\mathrm{B}_{1 / 2}\right)} \leq 1 .
$$

## Two Competing Inequalities

1. Sobolev Inequality:

for $p=\frac{2 n}{n-2}>2$.
2. Energy Estimate:

## Two Competing Inequalities

1. Sobolev Inequality:

$$
\int_{\mathrm{B}_{1}}|\mathrm{f}|^{\mathrm{p}} \mathrm{dX} \leq \mathrm{C}\left(\int_{\mathrm{B}_{1}}|\nabla \mathrm{f}|^{2} \mathrm{dX}\right)^{\mathrm{p} / 2},
$$

for $\mathrm{p}=\frac{2 \mathrm{n}}{\mathrm{n}-2}>2$.
2. Energy Estimate:

## Two Competing Inequalities

1. Sobolev Inequality:

$$
\int_{\mathrm{B}_{1}}|\mathrm{f}|^{\mathrm{p}} \mathrm{dX} \leq \mathrm{C}\left(\int_{\mathrm{B}_{1}}|\nabla \mathrm{f}|^{2} \mathrm{dX}\right)^{\mathrm{p} / 2},
$$

for $\mathrm{p}=\frac{2 \mathrm{n}}{\mathrm{n}-2}>2$.
2. Energy Estimate: If $v \geq 0$ satisfy $\operatorname{div}\left(a_{j j}(X) D v\right) \geq 0$ in $B_{1}$, Then,

## Two Competing Inequalities

1. Sobolev Inequality:

$$
\int_{\mathrm{B}_{1}}|\mathrm{f}|^{\mathrm{p}} \mathrm{dX} \leq \mathrm{C}\left(\int_{\mathrm{B}_{1}}|\nabla \mathrm{f}|^{2} \mathrm{dX}\right)^{\mathrm{p} / 2},
$$

for $\mathrm{p}=\frac{2 \mathrm{n}}{\mathrm{n}-2}>2$.
2. Energy Estimate: If $\mathrm{v} \geq 0$ satisfy $\operatorname{div}\left(\mathrm{aij}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Dv}\right) \geq 0$ in $\mathrm{B}_{1}$, Then,

$$
\int_{\mathrm{B}_{1}}|\mathrm{D}(\psi \mathrm{v})|^{2} \mathrm{dX} \leq \mathrm{C} \sup |\nabla \psi|^{2} \int_{\mathrm{B}_{1}}(\mathrm{v})^{2} \mathrm{dX}, \quad \forall \psi \in \mathrm{C}_{0}^{\infty}\left(\mathrm{B}_{1}\right)
$$

## Two Competing Inequalities

1. Sobolev Inequality:

$$
\int_{\mathrm{B}_{1}}|\mathrm{f}|^{\mathrm{p}} \mathrm{dX} \leq \mathrm{C}\left(\int_{\mathrm{B}_{1}}|\nabla \mathrm{f}|^{2} \mathrm{dX}\right)^{\mathrm{p} / 2},
$$

for $\mathrm{p}=\frac{2 \mathrm{n}}{\mathrm{n}-2}>2$.
2. Energy Estimate: If $\mathrm{v} \geq 0$ satisfy $\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Dv}\right) \geq 0$ in $\mathrm{B}_{1}$, Then,

$$
\int_{\mathrm{B}_{1}}|\mathrm{D}(\psi \mathrm{v})|^{2} \mathrm{dX} \leq \mathrm{C} \sup |\nabla \psi|^{2} \int_{\mathrm{B}_{1}}(\mathrm{v})^{2} \mathrm{dX}, \quad \forall \psi \in \mathrm{C}_{0}^{\infty}\left(\mathrm{B}_{1}\right)
$$

## * Sobolev and Energy Inequalities compete in a different homogeneity $\star$

## Family of Cut-offs

- Define

$$
\psi_{\mathrm{k}}(\mathrm{X}):= \begin{cases}1 & \text { in } \mathrm{B}_{\frac{1}{2}+2^{-k}} \\ 0 & \text { in } \mathrm{B}_{1} \backslash \mathrm{~B}_{\frac{1}{2}+2^{-(k-1)}}\end{cases}
$$

- $\left|\mathbf{D} \psi_{\mathrm{k}}\right| \sim 2^{\mathrm{k}}$.
- $\psi_{\mathrm{k}-1} \equiv 1 \mathrm{in} \operatorname{supp} \psi_{\mathrm{k}}$.

## Family of Cut-offs

- Define

$$
\psi_{\mathrm{k}}(\mathrm{X}):= \begin{cases}1 & \text { in } \mathrm{B}_{\frac{1}{2}+2^{-k}} \\ 0 & \text { in } \mathrm{B}_{1} \backslash \mathrm{~B}_{\frac{1}{2}+2^{-(k-1)}}\end{cases}
$$

- $\left|\mathbf{D} \psi_{\mathrm{k}}\right| \sim 2^{\mathrm{k}}$.
- $\psi_{\mathrm{k}-1} \equiv 1$ in supp $\psi_{\mathrm{k}}$.

## Family of Cut-offs

- Define

$$
\psi_{\mathrm{k}}(\mathrm{X}):= \begin{cases}1 & \text { in } \mathrm{B}_{\frac{1}{2}+2^{-k}} \\ 0 & \text { in } \mathrm{B}_{1} \backslash \mathrm{~B}_{\frac{1}{2}+2^{-(k-1)}}\end{cases}
$$

- $\left|\mathbf{D} \psi_{\mathrm{k}}\right| \sim 2^{\mathrm{k}}$.
- $\psi_{\mathrm{k}-1} \equiv 1$ in $\operatorname{supp} \psi_{\mathrm{k}}$.

## Family of Cut-offs

- Define

$$
\psi_{\mathrm{k}}(\mathrm{X}):=\left\{\begin{array}{lll}
1 & \text { in } & \mathrm{B}_{\frac{1}{2}+2^{-k}}=: \mathrm{B}_{\mathrm{k}} \\
0 & \text { in } & \mathrm{B}_{1} \backslash \mathrm{~B}_{\frac{1}{2}+2^{-(k-1)}}
\end{array}\right.
$$

- $\left|\mathbf{D} \psi_{\mathrm{k}}\right| \sim 2^{\mathrm{k}}$.
- $\psi_{\mathrm{k}-1} \equiv 1 \mathrm{in} \operatorname{supp} \psi_{\mathrm{k}}$.

## Family of Cut-offs

- Define

$$
\psi_{\mathrm{k}}(\mathrm{X}):=\left\{\begin{array}{lll}
1 & \text { in } & \mathrm{B}_{\frac{1}{2}+2-\mathrm{k}}=: \mathrm{B}_{\mathrm{k}} \\
0 & \text { in } & \mathrm{B}_{1} \backslash \mathrm{~B}_{\frac{1}{2}+2-(k-1)} .
\end{array}\right.
$$

- $\left|\mathrm{D} \psi_{\mathrm{k}}\right| \sim 2^{\mathrm{k}}$.
- $\psi_{\mathrm{k}-1} \equiv 1$ in $\operatorname{supp} \psi_{\mathrm{k}}$.

## Non-Linear Recursive Relation

- Define $\mathrm{u}_{\mathrm{k}}:=\left(\mathrm{u}-\left[1-2^{-\mathrm{k}}\right]\right)^{+}, \& \mathrm{~A}_{\mathrm{k}}:=\left\|\mathrm{u}_{\mathrm{k}} \psi_{\mathrm{k}}\right\|_{\mathrm{L}^{2}}$.

## Non-Linear Recursive Relation

- Define $\mathrm{u}_{\mathrm{k}}:=\left(\mathrm{u}-\left[1-2^{-\mathrm{k}}\right]\right)^{+}, \& \mathrm{~A}_{\mathrm{k}}:=\left\|\mathrm{u}_{\mathrm{k}} \psi_{\mathrm{k}}\right\|_{\mathrm{L}^{2}}$.

## Non-Linear Recursive Relation

- Define $\mathrm{u}_{\mathrm{k}}:=\left(\mathrm{u}-\left[1-2^{-\mathrm{k}}\right]\right)^{+}, \& \mathrm{~A}_{\mathrm{k}}:=\left\|\mathrm{u}_{\mathrm{k}} \psi_{\mathrm{k}}\right\|_{\mathrm{L}^{2}}$.

## Non-Linear Recursive Relation

- Define $\mathrm{u}_{\mathrm{k}}:=\left(\mathrm{u}-\left[1-2^{-\mathrm{k}}\right]\right)^{+}, \& \mathrm{~A}_{\mathrm{k}}:=\left\|\mathrm{u}_{\mathrm{k}} \psi_{\mathrm{k}}\right\|_{\mathrm{L}^{2}}$.
- We want to show

$$
\psi_{\mathrm{k}} \mathrm{u}_{\mathrm{k}} \xrightarrow{\mathrm{k} \rightarrow \infty} 0, \text { provided }\left\|\mathrm{u}^{+}\right\|_{\mathrm{L}^{2}} \ll 1
$$

- Combing Sobolev Inequality and Energy Estimate, we reach the following Non-Linear Recursive Relation:

$$
\begin{aligned}
& A_{k} \leq C\left[2^{2 k} A_{k-1}\right]^{\mu+1} \\
& \text { ll enough, indeed } A_{k} \xrightarrow{k \rightarrow \infty} 0 .
\end{aligned}
$$

## Non-Linear Recursive Relation

- Define $\mathrm{u}_{\mathrm{k}}:=\left(\mathrm{u}-\left[1-2^{-\mathrm{k}}\right]\right)^{+}, \& \mathrm{~A}_{\mathrm{k}}:=\left\|\mathrm{u}_{\mathrm{k}} \psi_{\mathrm{k}}\right\|_{\mathrm{L}^{2}}$.
- We want to show

$$
\psi_{\mathrm{k}} u_{k} \xrightarrow{k \rightarrow \infty} 0, \text { provided }\left\|\mathbf{u}^{+}\right\|_{\mathrm{L}^{2}} \ll 1
$$

- Combing Sobolev Inequality and Energy Estimate, we reach the following Non-Linear Recursive Relation:

$$
\mathrm{A}_{\mathrm{k}} \leq \mathrm{C}\left[2^{2 \mathrm{k}} \mathrm{~A}_{\mathrm{k}-1}\right]^{\mu+1}
$$

- Thus, if $A_{0}$ is small enough, indeed $A_{k}$

## Non-Linear Recursive Relation

- Define $\mathrm{u}_{\mathrm{k}}:=\left(\mathrm{u}-\left[1-2^{-\mathrm{k}}\right]\right)^{+}, \& \mathrm{~A}_{\mathrm{k}}:=\left\|\mathrm{u}_{\mathrm{k}} \psi_{\mathrm{k}}\right\|_{\mathrm{L}^{2}}$.
- We want to show

$$
\psi_{\mathrm{k}} \mathrm{u}_{\mathrm{k}} \xrightarrow{\mathrm{k} \rightarrow \infty} 0, \text { provided }\left\|\mathrm{u}^{+}\right\|_{\mathrm{L}^{2}} \ll 1
$$

## Oscillation Lemma

## Lemma (De Giorgi's oscillation lemma)

Let u be a solution to $\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Du}\right)=0$ in $\mathrm{B}_{1}$.
oscu $=2$, then

for some $\lambda<1$ that depends only on ellipticity.

## Oscillation Lemma

## Lemma (De Giorgi's oscillation lemma) <br> Let $u$ be a solution to $\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Du}\right)=0$ in $\mathrm{B}_{1}$. Assume $\operatorname{osc} u=2$, then <br> $B_{1}$

for some $\lambda<1$ that depends only on ellipticity.

## Oscillation Lemma

Lemma (De Giorgi's oscillation lemma)
Let $u$ be a solution to $\operatorname{div}\left(\mathrm{a}_{\mathrm{ij}}(\mathrm{X}) \mathrm{Du}\right)=0$ in $\mathrm{B}_{1}$. Assume $\operatorname{osc} u=2$, then $\mathrm{B}_{1}$

$$
\underset{\mathrm{B}_{1 / 2}}{\operatorname{osc} \mathrm{u}} \leq 2 \lambda,
$$

for some $\lambda<1$ that depends only on ellipticity.

## Geometrical Idea of the Proof

1. We can assume $-1 \leq u \leq 1$.
2. If $u$ is a solution, then $u^{+}$is a subsolution .

## Geometrical Idea of the Proof

1. We can assume $-1 \leq u \leq 1$.
2. If $u$ is a solution, then $u^{+}$is a subsolution .

## Geometrical Idea of the Proof

1. We can assume $-1 \leq u \leq 1$.
2. If $u$ is a solution, then $u^{+}$is a subsolution (suitable for the $L^{2} \Rightarrow L^{\infty}$ Lemma).

## Geometrical Idea of the Proof

1. We can assume $-1 \leq u \leq 1$.
2. If $u$ is a solution, then $u^{+}$is a subsolution (suitable for the $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ Lemma).
3. If $\mathbf{u}^{+}$is zero "most of the time", previous Lemma guarantees

$$
\mathrm{u}^{+} \leq 1 / 2 \text { in } \mathrm{B}_{1 / 2}
$$

and the Oscillation Lemma is Proven!.

## Geometrical Idea of the Proof

1. We can assume $-1 \leq u \leq 1$.
2. If $u$ is a solution, then $u^{+}$is a subsolution (suitable for the $\mathrm{L}^{2} \Rightarrow \mathrm{~L}^{\infty}$ Lemma).
3. If $\left\|\mathrm{u}^{+}\right\|_{\mathrm{L}^{2}\left(\mathrm{~B}_{3 / 4}\right)} \leq \delta / 2$, previous Lemma guarantees

$$
\mathrm{u}^{+} \leq 1 / 2 \text { in } \mathrm{B}_{1 / 2}
$$

and the Oscillation Lemma is Proven!.

## How do you produce the above situation?

1. Assume $\mathrm{u}^{+} \equiv 0$ at least half of the time in $\mathrm{B}_{3 / 4}$.
2. Cut the graph of $u^{+}$at level $1 / 2$, i.e. define

$$
\mathrm{v}_{1}:=\min \left\{\mathrm{u}^{+}, 1 / 2\right\} .
$$

3. Because $\left\|\mathbf{u}^{+}\right\|_{L^{2}}$ is under control, it needs some room to go from 0 to 1/2.
4. Thus, Vol. $\left(\left\{v_{1}=1 / 2\right\}\right)$ is a fixed proportion larger than Vol. $\left(\left\{\mathbf{u}^{+}=0\right\}\right)$ in $\mathrm{B}_{3 / 4}$.
5. Consider the above part of the truncation and re-scale it to the normalized picture.
6. Repeat the procedure until you reach the previous situation.

## How do you produce the above situation?
